Do cell phones have built-in security?

Android and iOS have built-in protection to keep you safe, but neither offer complete protection. A good mobile antivirus, however, can fill the gaps left by Google and Apple, and allow you to really enjoy your mobile device without a care.

Samsung Knox provides another layer of protection, both for separating work and personal data, and for protecting the operating system from manipulation. This, combined with a modern antivirus solution, can go a long way toward limiting the impact of these expanding malware threats

Can someone hack my phone by texting me?
Android phones can get infected by merely receiving a picture via text message, according to research published Monday. This is likely the biggest smartphone flaw ever discovered.
Can someone track your phone if your location is off?
The answer is **yes, it's possible to track mobile phones even if location services are turned off**. Turning off the location service on your phone can help conceal your location. This is important if you don't want third parties knowing where you are or being able to track your movement.Jul 13, 2022

Can My Phone Be Tracked If Location Services Are Off? | McAfee Blog

- Rerouting your messages.

- Stealing your personal information.

- SIM swaps.

- Text scams and spyware.

- Doxxing that leads to harassment and fraud.

- Blackmail using your sensitive data.

- Spoofing caller ID numbers.

- Preying on your family.

Safety Measures to Follow for Enhanced Mobile Security

To protect against mobile malware, a variety of <u>free mobile security software</u> is available for download from Android's Google Play Store and Apple's App Store. Users can also employ the following methods to enhance their mobile security:

- **Create a strong password**
  Users can <u>create a strong password</u> on their smartphone. If a password attempt fails a certain number of times, the phone will lock, disable, and in some cases even erase all data.
- **Be wary of text messages**
  Text messages are an easy target for mobile malware, so it's advisable for users not to send sensitive data such as credit card details or important private information by text.
- **Check your browser for the lock symbol**

The lock icon in the browser's address bar indicates that you are on a secure and reputable connection. Check for this when entering personal data such as your address or payment information or sending emails from your mobile browser.

- **Ensure your apps are from reputable sources**
  Popular shopping sites such as Amazon or eBay have their own mobile applications. If you seek to use these apps, check to see they are the official apps from the company before you initiate a download. This can be done by checking the developer information and user ratings on the download page.
