Security

Safe Browsing

Enhanced protection: Faster, proactive protection against dangerous websites, downloads, and extensions.

Warns you about password breaches.
Requires browsing data to be sent to

Tuesda Google.

Safe Browsing

- Predicts and warns you about dangerous events before they happen.
- Keeps you safe on Chrome and may be used to improve your security in other Google apps when you are signed in.
- Improves security for you and everyone on the web.
- Warns you if passwords are exposed in a data breach.
- Sends URLs to Safe Browsing to check them. Also sends a small sample of pages, downloads, extension activity, and system information to help discover new threats. Temporarily links this data to your Google Account when you're signed in, to protect you across Google apps.

- Chrome periodically checks your passwords against lists that have been published online. When
 doing this, your passwords and usernames are encrypted, so they can't be read by anyone,
 including Google.
- Always use secure connections
- Upgrade navigations to HTTPS and warn you before loading sites that don't support it
- Use secure DNS
- Determines how to connect to websites over a secure connection
- With your current service provider
- Secure DNS may not be available all the time
- Your devices
- You're signed into Chrome on these devices, so you can use them as security keys.
- Pixel 6a
- Linked devices

You can purchase a Google Titan SecurityKey, or use any FIDO compliant security key to enroll. We recommend two – one as your main key the other as your backup key.

Helping to make elections safer.

• To make political organizations safer with Advanced Protection, we're partnered with Defending Digital Campaigns to provide free Titan Security Keys. See if your team is eligible for free keys.

Safe Guarding Human Rights

We have partnered with the International Foundation for Electoral Systems on global educational security for at risk groups so those who work to safeguard human rights can stay safe online.

Bad Password Habits

- 10 Bad Password Habits You Need to Break
- 10 Bad Habits you need to Break
 - Putting Personal information into Passwords
 - Using a "Keyboard Walking" Password
 - Reusing the Same Passwords Everywhere
 - Insecure Password Storage
 - Not Using a Password Generator or Manager
 - Skipping Multi-Factor Authetication
 - Never Updating Old Passwords
 - Using Passwords Instead of Passkeys

Delete your Old OnLine Accounts

- Close old accounts to protect your personal data, identity details, and credit card numbers from potential attackers or data breaches. You can check if an password has been leaked at haveibeenpwned.com.
- Use password managers or search through your email to find old accounts you no longer use.

 If you can't delete an account, remove financial and personal information, and consider anonymizing the account by changing the email address and personal details to something random to minimize the risk of data compromise.

The Best Way to Remove Yourself From the Internet

- Uninstall Unnecessary Apps
- Uninstall Unnecessary Apps
- Update or Delete Social Media Profiles
- Use a Data Removal Service

Make your Presence on the Internet Safe
